

Majuba Hill Copper Project

Galileo
EXPLORATION LTD.
TSX: V-GXL

The 100% option to own Majuba Hill Copper project is an advanced stage copper/silver/gold porphyry. On September 28th, 2017 Galileo Exploration Ltd. released results of its recently completed 3-line 9,000 metre Induced Polarization (IP) survey on its Majuba Hill Copper/Silver/Gold porphyry project in Pershing County, North Central Nevada, USA.

The IP survey, conducted by Durango Geophysical Operations of Durango, Colorado targeted the southern extension of strong copper-silver mineralization intersected in drill hole MMX-24 which cut 222m of 0.27% copper and 10 g/t silver including 117 m grading 0.43% copper and 12 g/t silver at the bottom of the hole open to depth.

Marcus and Marcus, a division of IDEA Drilling LLC, of Coeur d'Alene, Idaho, was contracted to conduct the company's drill program which began on November 4th, 2017. A total of 2,000 feet in three holes is anticipated to take up to 3 weeks to complete, with lab results to follow shortly afterwards. No drilling has been conducted previously in this area.

The original **Majuba Hill Mine** produced 2.8 million lbs of oxide copper grading from four to twelve percent (4 to 12%) copper during the period 1907 through 1947 from the top of the porphyry system.

The survey was successful in outlining an IP chargeability anomaly above 8-10 msec, over a width of 400 to 800m+, and along a strike length in excess of 1,200 meters interpreted to be open to the south and east. The depth to the potential sulphide target varies from surface on the north to 150-200 metres on the south. Mineralization intersected in drill hole MMX-24 is associated with disseminated chalcocite-chalcopyrite-arsenopyrite-pyrite sulphides in a quartz-sericite altered porphyritic intrusive with disseminated tourmaline and quartz — tourmaline — sulphide stockworks.

Exploring Nevada Cu/Au/Ag

Galileo
EXPLORATION LTD.
TSX: V-GXL

Galileo Exploration Ltd. (the "Company") is a public company headquartered in Vancouver, Canada. The management team has been successful in the discovery to production of numerous junior resource companies and brings decades of international experience including financing, executing feasibility studies, construction of mining projects, mine operations management and executive corporate leadership. The Company is currently focused on the **Majuba Hill Copper** project situated in North Central Nevada within 12 miles of the Florida Canyon mine. The Majuba Hill project is an advanced stage Cu/Ag/Au porphyry target.

Galileo recently acquired an option to purchase 100% of the **Signal Property** consists of 79 lode mining claims on the west edge of the Eureka District, Nevada. The Property lies adjacent the Ruby Hill Mine, formerly operated by Barrick Gold. The Signal Property hosts outcropping Carlin type gold mineralization of several distinct styles. Seven previous operators have completed approximately 50,000 feet of drilling.

MANAGEMENT TEAM

Ron Rieder, President/CEO

30 years of corporate finance and public business experience. Former President /CEO of Lucky Strike Uranium Exploration. Expertise in strategic resource planning, financing and corporate communications.

Mark Brown, Director/CFO

Senior management positions with numerous public companies, former Chartered Accountant with Price Waterhouse. Expertise in acquisitions, financing, corporate reporting and international tax planning.

Marc Blythe, Director

International mining expert on the evaluation and development of mineral exploration projects in gold, silver, copper, zinc and nickel. Previously he was a senior mining engineer with Placer Dome and WMC Resources.

John Kanderka, Director

Over 35 years of experience as a landman in the oil and gas industry. Co-founder Trimox Energy Inc. and Terraquest Energy Corp. Member of the Canadian Association of Petroleum Landman (CAPL).

Signal property

Project Overview
Technical Reports
Back to Projects

The Signal property is located along Nevada's Battle Mountain/Eureka Gold trend, in the northwest portion of the Eureka District. Within the district are several active exploration projects and Barrick's Ruby Hill gold mine, located six kilometres to the east of Signal.
